No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                This invention relates to a C-type lectin, termed Mincle, which is formed from a transcriptional target gene of nuclear factor interleukin 6 (NF-116). Mincle is a macrophage activating protein which can be used in the treatment of immune disorders, and inflammation. Compositions containing the protein have immunomodulatory and antiinflammatory activity. The present sequence represents murine cDNA encoding Mincle

AAF81741 to AAF81777 encode the human membrane associated proteins

(MEMAP) given in AAB74695 to AAB74731. MEWAPS have cytostatic,

continifiammatory, anticonvollabant, immunosuppressive, antidiarrheic and

antiarteriosclerotic activities, which can be used in gene therapy.

Continifiammatory, anticonvollabant, immunosuppressive, antidiarrheic and

antiarteriosclerotic activities, which can be used in gene therapy.

MEMAPS and agonist of MEWAPS can be used to treat a disease or condition

Confered with decreased expression of functional MEMAP. These disorders include cell

Conference are used to treat a disease or condition associated with

Conference are used to treat a disease or condition associated with

Conference and memaPy polynuclectides and proteins are also used for the

disponsis of these disorders. Specific examples of these disorders

Conference and memaPy polynuclectides and proteins are also used for the

Conference and memaPy polynuclectides and proteins and small

Conference memaPy polynuclectides can be used to prepare transagentc

Conference MEMAP polynuclectides can be used to prepare transagentc

almals which can be studied to provide information concerning human

disease. Anti-MEMAP antibodies are useful in immunoassays for the

Conference on MEMAP protein and can be used as antagonists to treat or

prevent a disorder associated with MEMAP. Polynuclectides encoding MEMAP

Con be delivered to target cells with genetic abnormalities with respect

Con the expression of MEMAP to treat or prevent a disorder associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated polypeptide with a human membrane associated protein sequence is useful for the diagnosis, prevention and treatment of cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                         antiinflammatory; anticonvulsant; immunosuppressive; antidiarrheic; antiarteriosoclerotic; gene therapy; call proliferative disorder; autoimmune disorder; inflammatory disorder; neurological disorder; gastrointestinal disorder; cancer; inflammation, atherosclerosis;

The present invention relates to hepatic-fibrosis disease markers (APP9032-APP9031). The APP9032-APP9031). The Sequences are useful for detecting and treating hepatic fibrosis caused by alcohol consumption, virus infection, etc., and the associated chronic hepatitis, etc. leading to liver firshosis and hepatic carcinoma. The markers allow the cause of hepatic fibrosis to be clarified (diagnostic precision), so more suitable treatments can be developed and given.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       278

                                                                                                                                                                                                                                                                ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                  AAX52213-74 encode secreted and transmembrane human proteins, and are obtained from cDNA libraries, prepared from fetal lung, fetal kidney, fetal brain, fetal liver and fetal retina. The encoded polypeptides have pecific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and chronic mucosal lesions (e.g. enterocolitis, Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithalial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells including Parcises. Alzheimer's disease, ALS, neuropathies or cancer. Pro255 can be used as for fibromodulin, e.g. for reducing dermal scarring. PRO264 can be used as a target for anti-tumor drugs. PRO269 can be used as an anti-thrombotic agent; PRO287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                    ğ
                                                                                                                                                                                                                      New isolated human genes and polypeptides used in, e.g. treatment gastrointestinal ulceration.

                                                                                                                                              The present sequence is one of sixty one nucleic acids encoding novel secreted and transmembrane PRO polypeptides. The PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell carcinoma), gastrointestinal disorders (e.g. lung stranson's disease), wound repair, cardiovascular disorders (e.g. Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atherosclerosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis), infertility, AIDS and diabetes and retinal disorders such as retinitis pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             342

                                                                                                           g
                                                                                                                                               ò
                                                                                                                                                                              g
                                                                                                                                                                                                         Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a comparing the level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human contacted with it. A specific polypeptide can be used to stimulate the proliferation of differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also can susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian choses, prostate, rectal, cervical, or liver tumours, in mammalian constitution be used for genetic analysis of individuals with genetic disorders
                                                                                                                               ţ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  283 ccrgagaarrrcacagagcrcrccrgcracaarranggarcaggrcagrcaagaarrgr 342
